& WELLNESS
MEDICAL CANNABIS CLINIC

CANNABIS TERPENES

TERPENES MAY PLAY A KEY ROLL IN THE EFFECTS OF VARIOUS CANNABIS STRAINS. SOME TERPENES MIGHT PROMOTE RELAXATION AND STRESS-RELIEF, WHILE OTHERS POTENTIALLY PROMOTE FOCUS AND ACUITY.

Bisabolol

anti-inflammatory, anti-irritant, anti-microbia

Borneol

antinociceptive, anti-inflammatory

Camphene

anti-oxidant, skin lesion

Caryophyllene

anti-bacterial, anti-fungal, anti-inflammatory

Delta 3 Carene

anti-inflammatory, bone stimulant

Eucalyptol

anti-bacterial, anti-fungal

Geraniol

anti-cancer, anti-oxidant, neuroprotectant

Humulene

antibacterial, anti-inflammatory, anti-tumor

Valencene

antiallergic, anti-inflammatory, anti-melanogenesis

Trans-nerolidol

anti-cancer, anti-microbial, antioxidant, anti-parasitic

Terpinolene

anti-bacterial, anti-fungal, anti-insomnia, antiseptic

Phytol

anti-insomnia, immunosuppressant

Pinene

anti-depressant, anti-inflammatory, anti-microbial

Myrcene

relaxing, sedating

Linalool

anti-anxiety, anti-epileptic, anti-psychotic, pain killing

Limonene

anti-anxiety, anti-cancer, digestion, gallstones

OUR MISSION

Pause Pain & Wellness exists to provide focused and compassionate care for our patients throughout the state of Mississippi using an evidence-based application of medical cannabis research.

Welcome to the Pause the Pain Community!

Our statewide locations and resources make us the only place you need to explore the benefits of medical-grade marijuana for your condition.

You are not alone. Over 70% of the public voters in Mississippi agreed to the legalization of Medical Marijuana in 2020.

We hope that you'll find our resources and community helpful as you inform yourself about this new treatment option.

Here are a few things you can do to get started:

- 1 Check out our website for information on our clinics, services, and patient resources.**

- 2 Subscribe to our blog for updates on the latest research and news in the cannabis industry.**

- 3 Join our online community on Facebook, Instagram, Twitter, LinkedIn, and YouTube, and connect with us.**

Thank you again for joining us, and we look forward to helping you find relief.

Sincerely,
The Pause Pain & Wellness team

As a Top Medical Marijuana Evaluation Clinic, **Pause Pain & Wellness** is:

Compassionate

- Our qualified providers will evaluate your qualifying condition and recommend a treatment plan.
- Our patient care specialists help guide you through the entire certification and registration process.

Convenient

- Patients are our #1 priority. Patient care available 5 days a week.
- 6 locations with more coming soon.
- Risk-free: If you don't qualify for medical marijuana, you don't pay.

Affordable

- Our medical marijuana evaluation services is all-inclusive.
- We offer monthly payment memberships.
- Check out our referral program. For each patient you refer us, you save \$20 off your next re-evaluation.
- Discounted pricing for veterans.

How to Become a Medical Marijuana Patient

Step 1

Do you have one of the following qualifying conditions?

If you don't see your condition or ailment on the list, don't worry, as you may still have options. Call us at 833.940.5060, and our friendly educator will be able to provide you with more information:

Chronic pain, anxiety disorders, insomnia, chronic muscle spasms, crohn's disease, post-traumatic stress disorder (PTSD), amyotrophic lateral sclerosis (ALS), cancer, epilepsy, glaucoma, HIV, AIDS, seizures, multiple sclerosis, Parkinson's disease

(Medical conditions of the same kind or class as or comparable to those above.)

Step 2

Make an appointment.

You'll be evaluated thoroughly in a setting that is comfortable and safe under the guidance of an expert. Scheduling an appointment is easy! Just go to our website at pausethepain.com to select a time and location near you. Or, if you prefer, you can call us at 833-940-5060.

Step 3

Get evaluated.

Once your medical evaluation is completed, you can apply for a state medical marijuana card, which is required to purchase your medicine at a dispensary (medical marijuana treatment center).

Step 4

Apply for your state medical marijuana card.

The state application processing fee is \$25, with easy online application submission and payment. On average, the state process takes 10 business days and the state card is valid for one year.

(Patients can start renewing their state cards 45 days before the current one expires. You cannot buy your medicine if the card is expired.)

Step 5

Go to the dispensary of your choice and fill your order.

And that's it! We keep things moving by setting up your re-evaluation appointment during your initial visit and periodically notifying you later on as well.

It's all a part of the Pause Pain & Wellness promise to bring you better care.

(By law, medical marijuana certification is only valid for 1 year, but requires 6 month follow-up evaluation.)

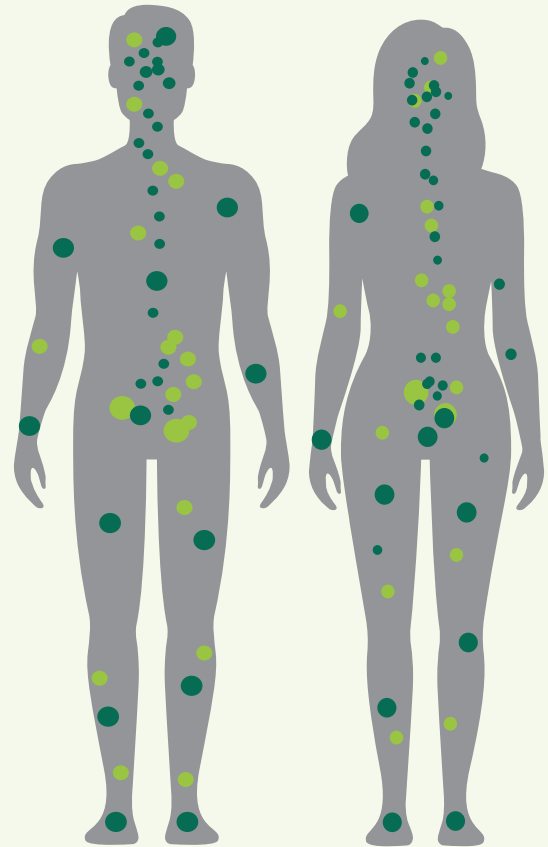

What is the Endocannabinoid System?

Understanding ECS

The Endocannabinoid System (ECS) is a complex system in the human body, which maintains all processes throughout the brain and body, including how the body manages appetite, pain, sleep, pleasure, and mood.

The role of this system is that of creating balance within the body to achieve the optimal state for maintaining health and natural wellness. ECS receptors are found in the skin, muscles, bones, throughout the central and peripheral nervous system, the immune system, and even the reproductive organs.

Certain chemical compounds called cannabinoids, attach to ECS receptors and behave like chemical messengers to control physiological signaling. When produced by the body, these compounds are called endocannabinoids and when created by plants, they are called phytocannabinoids, such as THC and CBD.

CB1 Receptors

are found mostly in the brain and central nervous system, and to a lesser extent elsewhere in the body.

Target

Thinking, Short Term Memory, Pain Perception, Appetite, Motor Activity, Motor Coordination, Immune Cells

CB2 Receptors

are found primarily in the peripheral organs, especially cells associated with the immune system.

Target

Eyes, Bones/Skeletal Muscles, Skin, Immune System, Respiratory System, Cardiovascular System, Gastrointestinal System, Reproductive System, Pancreas/Liver

CBD Can **Benefit Your Wellness**

Why CBD?

CBD, one of over 100 identified cannabinoids extracted from the hemp plant, has been known to aid individuals (and pets) with relief from muscle aches, stress, inflammation reduction, better sleep, and skin care. CBD may work with the Endocannabinoid System (ECS) to help signal and regulate the proper balance in bodily functions (there is a page later in the Guide on the Endocannabinoid System to learn even more).

Even CBD containing a trace amount of THC (below 0.3% as allowed by law) is not psychoactive and will not produce a high, which makes it an appealing option for those who are looking for relief from pain and other symptoms without the potential mind-altering effects of medical marijuana or pharmaceutical drugs.

Patients new to medical marijuana may find it beneficial to take CBD while waiting for their medical card to help ease symptoms and to prime the body prior to their initial dose of medical marijuana.

Some individuals have noticed that CBD can help offset the psychoactive side effects of higher THC medical marijuana products and that by combining their use of medical marijuana with CBD products, they experience a better result and may need to use less THC due to the Entourage Effect (learn more about the Entourage Effect later in the Guide).

Navigating the CBD Spectrums

When considering which CBD products to purchase, it is important to consider what type of CBD will work best for your lifestyle:

Full Spectrum CBD contains all of the natural elements found in industrial hemp plants such as the cannabinoids and terpenes, working together to deliver maximum effects to the user. Full spectrum CBD produces no psychoactive effects even though it contains trace amounts of less than 0.3% THC, falling below the legal limit. Studies show that full spectrum offers the complete benefits of CBD as it gives that full dose of all the organic cannabinoids and terpenes present in the plant.

Broad Spectrum CBD maintains most of the benefits of full spectrum CBD minus all trace amounts of THC. If you're looking to add CBD to your wellness regimen while avoiding any interaction with THC – or strict THC laws in your state – you'll find that broad spectrum CBD may be an ideal choice. This provides you with a worry-free solution to enjoying the naturally soothing benefits of CBD oils.

CBD Isolate contains pure, isolated CBD without any of the other natural compounds present in full and broad spectrum CBD. All of the plant's compounds are extracted through a process that removes its cannabinoids, flavonoids, and terpenes. Since this is a concentrated product, it is unable to deliver the entourage effect present in full or broad spectrum CBD.

Medical Marijuana and the Human Endocannabinoid System

Medical Marijuana Relieves

Often times, diseases and illnesses produce extremely painful symptoms. Cannabis has proven as an effective treatment for people suffering from migraines, arthritis, multiple sclerosis, PMS, anxiety, etc. Cannabis also has the ability to prevent and/or decrease opiate addiction due to the fact that cannabis and opiates share many of the same benefits. When compared to opiates, cannabis carries a significantly lower risk.

Medical Marijuana Combats

Cannabis significantly combats the symptoms of depression and anxiety often associated with PTSD. It is a natural relaxant that can ease the symptoms of these disorders. As a result, using cannabis will boost mood, improve sleep and lessen the number of episodes that one may experience. Cannabis is commonly used to stimulate the appetite of chemotherapy patients.

Medical Marijuana Treats

Marijuana treats symptoms of many different diseases. Cannabis can temporarily decrease pressure in the eye, hence relieving the symptoms of glaucoma. It has antispasmodic properties, which decrease symptoms of epilepsy, seizures and Parkinson's diseases. As far as inflammatory bowel diseases go, cannabis can treat several related symptoms like nausea, abdominal pain and diarrhea. Medical marijuana can also treat asthma by improving pulmonary function, over time.

Medical Marijuana Calms

Cannabis has the ability to calm a patient. Medical marijuana can effectively calm the symptoms of Tourette's by slowing down the tics associated with the disease. It can also treat OCD by decreasing the obsessive neurological compulsions.

Why Medical Marijuana?

The use of the cannabis plant to relieve medical symptoms has been documented for over five centuries across the globe from China to Canada to the UK to Israel.

The medical properties of cannabis stem from two main compounds, THC and CBD, along with over 100 other beneficial compounds in Marijuana including other cannabinoids along with terpenes and flavonoids.

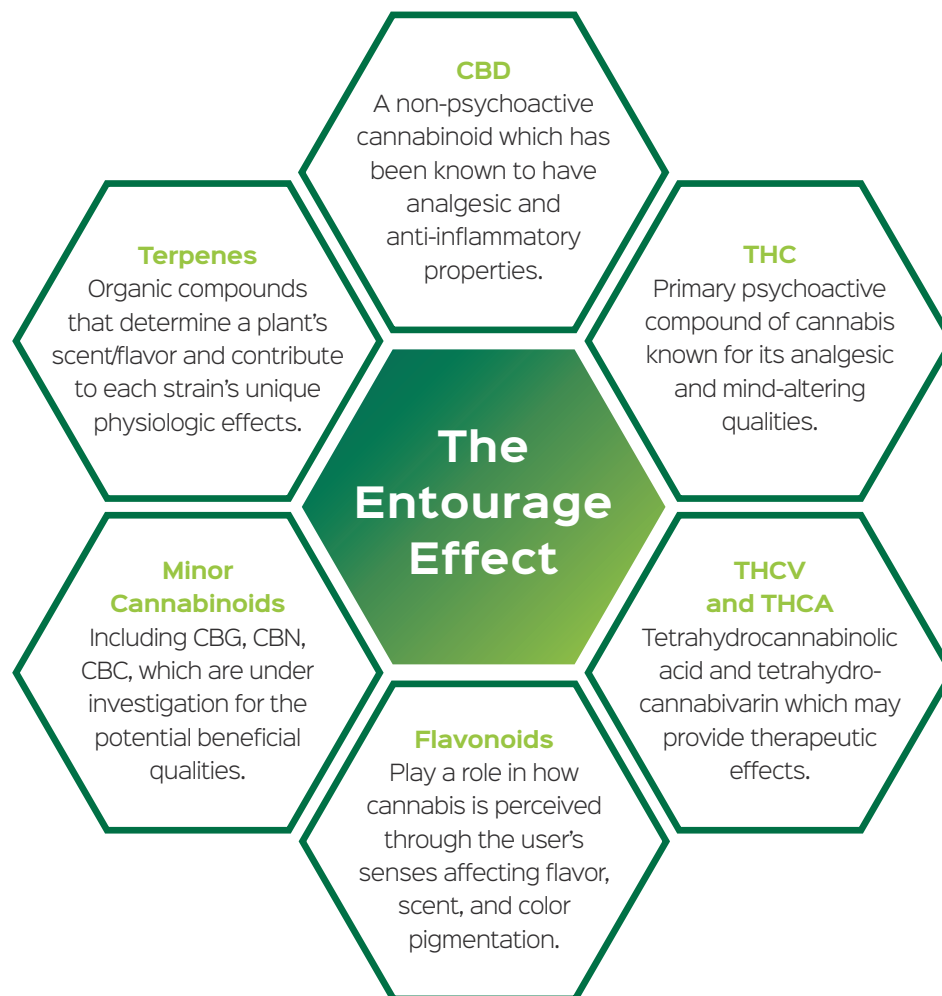

Leveraging the Power of the Entourage Effect

What is the Entourage Effect?

The Entourage Effect is the overall result of the combined action of the numerous compounds found in the cannabis plant—the cannabinoids (including THC and CBD), the terpenes, and the flavonoids – which interact in harmony to produce stronger, more enhanced effects from the plant than might otherwise occur without all the

elements present. When taken alone, each of these compounds may have therapeutic effects, but when they are present together in whole-plant extracts, the combined effect may be greater than the sum of the individual benefits along with lower adverse side effects.

Therapeutic Effects of Qualifying Conditions

Medical marijuana relieves symptoms of the following qualifying conditions:

Glaucoma

Temporarily lowers intraocular pressure.

Cancer

Eases the side effects of cancer treatment; relieves nausea, vomiting, anxiety, depression; enhances sleep; stimulates appetite.

Multiple Sclerosis

Relieves muscle spasms, stiffness, pain and sleep problems.

Parkinson's

Relieves muscle spasms, tremors, stiffness, and pain.

Epilepsy

Reduces seizure frequency.

PTSD

Relieves anxiety and depression; improves mood.

Crohn's Disease

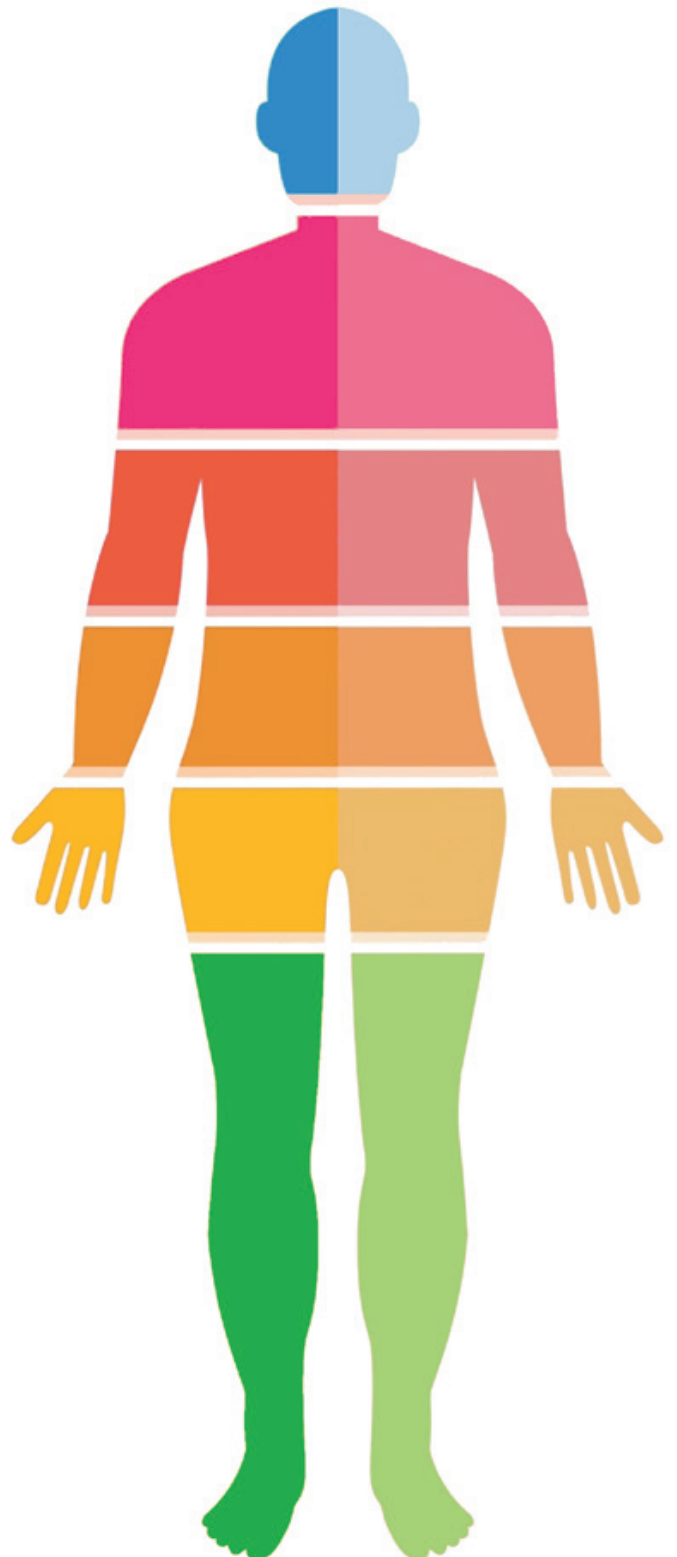

Eases pain and promotes weight gain.

AIDS/HIV

Improves mood and appetite; increases ability to sleep.

ALS

Relieves muscle spasms, stiffness and pain; improves mood and appetite.

“Leading the Industry in Cannabis Education”

Hybrid Relief is a locally owned and operated dispensary in Oxford, MS. We are not only familiar with all cannabis products and their effects, but also the symptoms and ailments that affect members of our community and how cannabis can help them.

STRAINS OF CANNABIS

STRAIN IS USED TO DIFFERENTIATE BETWEEN CANNABIS SATIVA AND INDICA. IT REFERS TO THE SPECIFIC BREED OF EACH INDIVIDUAL PLANT OVER THE YEARS. FAMILIAL STRAINS HAVE DIVIDED INTO SPECIFIC SUBSECTIONS. THOUGH STRAINS MAY LINAGE. THE DIFFERENCES ARE NUMEROUS.

SATIVA STRAINS

INDICA STRAINS

HYBRID STRAINS

Sativa strains have an uplifting effect and offer a cerebral high that includes :

- Laughing uncontrollably
- Engaging in in-depth conversations
- Thinking creativity

Sativa strains grow tall and thin - the plant can grow up to 20 feet in an outside garden. Popular strains include:

Indica strains have a relaxing, sedative effect, often used to :

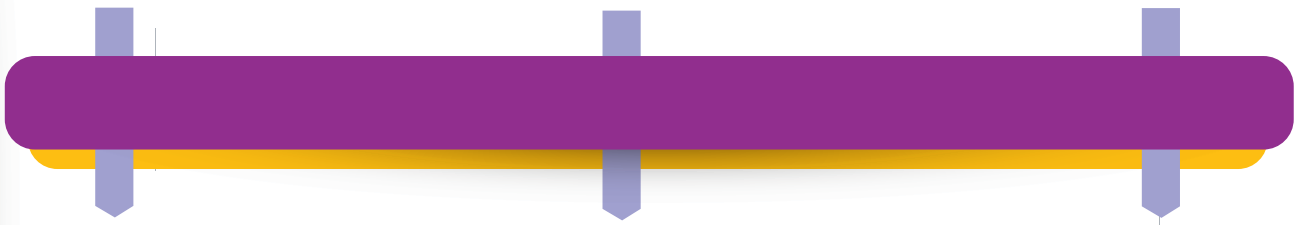

- Reduce stress
- Relieve pain
- Limit anxiety

Indica strains are a bushy plant that can grow between 3 and 6 feet tall and are suitable for growing indoors. Popular strains include :

Hybrid strains offer a mix of effects, combining the traits they inherited from their parent strains. Hybrids are known to :

- Offer a relaxing body effect
- Create balance of mind and body
- Limit anxiety

Of the roughly 779 strains, over half of them are hybrids. Popular strains include:

AMNESIA HAZE

Beloved by morning users, offers an uplifting boost

GREEN CRACK

Users are rewarded with a blast of exhilarated energy.

CHERRY AK

With a sweet, fruity smell and taste, this strain can help elevate + mood

SOUR DIESEL

Despite a diesel smell, this strain offers the highest happiness quotient

BUBBA KUSH

With a coffee and chocolate taste, this strain has a heavy tranquilizing effect.

NORTHERN LIGHTS

This pure indica is known to have come from the "mother plant."

HEROJUANA

To battle insomnia, this strain induces a heavy, relaxing sleep.

SKYWALKER OG

This strain is known for its healing properties for those with PTSD

BLUE DREAM

Offers a total relaxation while energizing the mind.

HEADBAND

Great for pain relief and a feeling of elation

GIRL SCOUT COOKIES

This strain is a more extreme version of Blue Dream, so easy!

PINEAPPLE EXPRESS

This sweet, tropical strain leaves one feeling happy and euphoric

What are Terpenes?

The Effect of Terpenes

Responsible for the distinctively sweet, citrusy, and earthy flavors of cannabis, terpenes are somewhat the unsung heroes of the cannabis world. If you've ever identified a strain from just one smell, or truly appreciated its taste, what you were processing is in fact the terpene profile which gives each strain its unique personality.

Terpenes change more than just the smell of marijuana, they also provide each strain with its own unique physiologic effects. These essential oils, which are secreted by the cannabis plant's sticky glands,

contribute to what is known as the "entourage effect" - the harmonic union of cannabinoids, terpenes and flavonoids which produces a more enhanced effect than any one compound on its own.

While there are more than 100 identified terpenes in cannabis (each of which produces a distinct combination of feelings and effects), some are more common than others. Knowing what to look for, what appeals to you, and what doesn't will help you get the relief that you need.

Glossary of Key Medical Marijuana Terms

Blunt/Joint

Cannabis rolled into a cigarette using paper.

Bong/Water Pipe

Pipe used to smoke cannabis by drawing the smoke through water to cool it.

Bowl/Pipe

Device used to smoke cannabis often made of ceramic/glass.

Bud

Cannabis flower.

Cannabinoid

Substances extracted from the cannabis plant including THC and CBD, as well as other less well known compounds such as CBN, THCV, THCA, and CBG. Cannabinoids interact with the Endocannabinoid System to bind directly or indirectly to ECS receptors, which behave like chemical messengers to turn on or turn off signaling in the body.

CBD

Cannabidiol (CBD) is a non-psychoactive cannabinoid known to have analgesic and anti-inflammatory properties.

Cone

A cone-shaped joint that is thinner at the tip.

Dabs

Cannabis concentrates such as shatter, wax, and oil.

Distillate

Cannabis extract that has been refined and purified.

Edible

Medical marijuana taken by ingesting cannabis-infused food.

Endocannabinoid System (ECS)

A complex system which maintains all processes throughout the human brain and body, including how the body manages appetite, pain, sleep, pleasure, and mood. The role of the ECS is to create balance within the body to achieve the optimal state for maintaining health and natural wellness.

Entourage Effect

The overall result of the combined action of the numerous compounds found in the cannabis plant interacting to produce stronger, more enhanced effects from the plant.

Grinder

Device used to grind pieces of cannabis flower.

Inhalation

Use of a vape pen to inhale medical marijuana - the active ingredients pass directly into the bloodstream in the lungs.

Loose Flower

Ground up bud.

MMUR

Medical Marijuana Use Registry: (800) 808-9580

OMMU

Office of Medical Marijuana Use: (850) 245-4657

Oral

Medical marijuana taken by mouth like gel caps/capsules.

Pre-roll

Cannabis that is pre-rolled into a cigarette shape with a filter.

Rosin

Concentrated cannabis through heat and compression.

Shatter

Cannabis that has been concentrated into solid pieces.

Sublingual

Taking a dose of tincture and holding it underneath the tongue for ~60 seconds so that the capillaries can absorb it directly into the bloodstream. This delivery allows faster absorption and greater bioavailability than when medical marijuana is ingested and needs to be broken down in the digestive system.

Terpenes

Organic compounds in plants which determine a plant's scent and flavor as well as contributing to each strain's unique physiologic effects.

THC

Tetrahydrocannabinol, the primary psychoactive compound of cannabis, known for its analgesic and mind-altering qualities.

Topical

Medical marijuana applied to the skin to provide relief.

Vape (Vaping, Vaporization)

Method of inhaling using heated liquid in vape form.

Wax

Concentrated cannabis with texture like candle wax.
